#### (Continued from last week.) How Watch Cases are Made.

A plate of solid cold 14 2-10 karats fine is soldered on each side of a plate of hard nickel composition metal, and the three are then passed between polished steel rollers. From this plate the various parts of the cases—backs, centers, besch, etc. re cut and shaped by dies and formers The gold is thick enough to admit of all kinds of chasing, engraving, and engine turning. The composition metal gives it needed strength, stiffness and solidity, while the written guarantee of the manufacturers warranting each case to wear twenty years proves that it contains all the gold that can possibly be needed. This guarantee is given from actual results, as many o these cases have been worn perfectly smoot by years of use without wearing through
